APTITUDE INNOVATION CENTER

Experience and Evaluate Technology

See it. Test it. Improve it. Before you build it.

Healthcare technology decisions can shape the patient, caregiver, and operational experience for decades. The **Aptitude Innovation Center** will give owners, clinicians, IT teams, designers, and project partners a hands-on environment to explore technologies, evaluate real-world workflows, and make more informed decisions before solutions are deployed in the field.

MOVE BEYOND THE PRODUCT DEMONSTRATION.

The Aptitude Innovation Center is being designed to make technology tangible. Instead of evaluating individual products in isolation, project teams can explore how systems connect, exchange information, and support the people who rely on them every day. The planned environment will include:

- A **mock patient room** integrated with clinical systems and a mock nurse station
- A **connected nurse station** where teams can explore clinical system interactions and workflows
- A **MSI Innovation Lab** focused on connected building technologies and integrated solutions.

BEFORE YOU BUILD IT, SEE IT IN ACTION.

Specifications and presentations can describe how a solution should work. A hands-on environment creates an opportunity to explore how it could work for your facility, your workflows, and your people.
